### **DETAILED ACTION**

This is in response to communication filed on August 10, 2010.

#### ***Status of Claims***

Claims 15 – 23 and 25 – 27 are pending, of which claim 15 is in independent form.

#### ***Claim Objections***

In light of applicant's amendments to the claims, the examiner withdraws the objection to claim 2 since claim 2 is now cancelled.

#### ***Allowable Subject Matter***

1. Claims 15 – 23 and 25 – 27 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record taken alone and/or in combination with each other fails to teach and/or fairly suggest the limitations of "exchanging data between the module and the portable software carrier unit via a bi-directional optical interface of the module while the module performs the primary function over the network via a network interface of the module, the data including information pertaining to accomplishment of the primary function and being exchanged independently of the primary function; receiving at least one piece of information pertaining to the accomplishment of the primary function via the bi-directional optical interface; storing temporarily the at least one piece of information in a second digital storage unit in the communication module; resetting the communication

module; and altering the contents of the first digital storage on basis of the at least one piece of information" in combination with other recited elements of independent claim 15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent Application 2007/0159971 discloses authenticating an access request in a subscriber access device that includes a route switching unit.

U.S. Patent Application 2002/0049899 and Patents 6,317,837 and 7,739,302 disclose a network attached device authorizing access requests before routing data.
